**Forensic & Compliance Systems Announces New Customer Wins for Cryoserver;
Email Compliance and Mirroring Technologies Enable Comprehensive
Message Archiving Solution for Local Governments**

*Jefferson County, Montana and City of Medford, Oregon Choose Cryoserver Email
Archiving Product to Protect Complete Email Records*

EAST NORTHPORT, NY – March 17, 2008 – Forensic & Compliance Systems (www.Cryoserver.com), the world's only forensic grade compliant message archiving solution, announced today that Jefferson County, Montana and the City of Medford, Oregon have both selected Cryoserver to handle their respective email archiving duties, ensuring complete and unchanged email records throughout their messaging systems. Cryoserver provides a compliant messaging archive solution that meets all government and industry compliance requirements while functioning in environments where high performance is critical.

The Cryoserver compliant messaging archive appliance is highly scalable – enabling easy archiving for a few dozen up to thousands of email message stores handling unlimited numbers of users. It's highly-available with exceptional performance, which means messages can be quickly searched and retrieved. And it supports cross-platform email solutions such as Lotus Notes/Domino, GroupWise and Exchange allowing companies to grow through acquisition without replacement of their strategic messaging archive.

“Cryoserver continues its success in the U.S. with these two important customer wins,” said Forensic & Compliance Systems CEO Ralph Harvey. “Jefferson County and the City of Medford have deployed Cryoserver’s unique mirroring technology adding to a

growing number of local government installations throughout the U.S. and U.K. These types of organizations are beginning to make Cryoserver a defacto message archive solution where indisputable complete records of email are required.”

“Selecting Cryoserver was a no-brainer for us. The ease of installation, the completeness of the record set – unaltered by complex policies – and the appliance packaging meant there was only one real choice,” said Carl Purdy, Information Technology Manager, Jefferson County, Montana. “Our ability to have a secure, in-house solution, the integrated support for Scalix (Linux), as well as the overall price and excellent performance sealed it for us.”

Cryoserver is a forensic email compliance solution that meets the data protection and privacy requirements of a wide range of organizations in industries including legal, finance and education, as well as government agencies. The Cryoserver email compliance archive solution is a tamper-evident, sealed appliance that is easy to implement and manage. Traditional email archiving solutions allow organizations to store data, but their lack of forensic and compliance capabilities prevents from being used in a court environment as admissible evidence. Cryoserver is the first email archiving product that successfully addresses this issue as it was built from the ground up to merge email archiving, compliance and forensic capabilities.

About FCS and Cryoserver

Forensic and Compliance Systems (FCS), is a privately-held company headquartered in Dublin, Ireland, with offices in London, Florida and New York and Colorado. The Cryoserver product line is a scalable, high-performance, forensic email compliance archive that enables organizations automatically and securely to collect, store and index all email communication – via a convenient, tamper-evident appliance. This enables eDiscovery and forensic analysis of an organization’s entire email history that is ready for court submission if necessary. The entire range of solutions is available from a network of channel partners. For details please visit www.Cryoserver.com or call 720-746-0408.
