

Cryoserver will:

- Ensure you get the very best out of Office 365 and make your email a valuable business asset
- Streamline your migration to Office 365, empowering all users with simpler, faster access to email and future-proof your move to the cloud
- Provide enriched searching, making Outlook the best place to find any email whenever you need it!

What's more...

Migrating to Office 365 is easy with Cryoserver - it requires no agent, meets PCI and legal requirements, saves time and stress

? What will you do with your existing emails?

From day one on MS Office 365 your users will still want access to their old email. Making this available means either importing data to the cloud, or running two email systems in parallel.

Cryoserver gives you a better way to preserve all your emails and make them available to all users, via Outlook. Cryoserver provides a simple and effective way to manage your move to the cloud, without disrupting email access for your users.

? How will you manage people who leave your organisation?

Make your searching faster and more accurate. Cryoserver keeps a copy of every email for as long as the business requires but only licences for live users.

Leavers' emails are retained, no user licence required, guaranteeing cost-effective access to all legacy email.

Cryoserver's simple delegated email access function is the perfect solution to deal with leavers' email.

What happens if you leave Office 365?

What's more...
Cryoserver is a safety net - it enables you to reduce risk and give your organisation the flexibility to switch from one SaaS email provider to another, today, tomorrow or in the future

There are many email service providers available today, organisations can shop around for best value.

However, switching provider can be time- consuming, complex and expensive often making it a difficult project to undertake.

Cryoserver ensures a business has freedom to change service providers. By holding all email sent and received by an organisation, Cryoserver facilitates effortless migration from one Service Provider to another making it the perfect Cloud Enabler for your business.

How does Cryoserver enhance Office 365?

What's more...
Cryoserver enriches the search capabilities and speeds up eDiscovery – it streamlines Outlook searches with standard and advanced interfaces, giving you more value from Office 365

Cryoserver works seamlessly with MS Office 365 to enhance the end-user email experience. Offering the fastest, simplest and most advanced search functionality on the market today, Cryoserver enables the end- user to find any email in seconds, without leaving Outlook.

Cryoserver also provides a sophisticated and fast eDiscovery tool for authorised privileged users. eDiscovery searches are closely monitored and audited and can provide evidential weight for legal and HR issues - when your business needs them most.

For mobile users, Cryoserver provides email access to users on the move with limited information risk to your organisation as no data is stored on the mobile device.

Where compliance matters, Cryoserver's tamper-evident journal archive provides the guarantee that your archive is complete and accurate, removing the risk of end user modifications, whether accidental or malicious.

Cryoserver delivers real business benefits and return on investment, making your email service a cost-effective business asset.
