

Cryoserver™

Expertly Simple Email Archiving

Cryoserver & EU GDPR

What do you need to know about EU GDPR?

Whatever business you're in, the EU GDPR has an impact on your organisation. GDPR (General Data Protection Regulation) is a set of regulations which applies to anyone doing business in, or with Europe. It places a spotlight on how companies handle Personally Identifiable Information, and places heavy fines on any misuse of data. According to GDPR you'll need to:

We've been able to get so granular by using the advanced features within Cryoserver's search that we get back the data we need extremely quickly. Finding data that would have taken all day to retrieve before, now only takes minutes.

Securely Handle Personally Identifiable Information (PII)

Cryoserver keeps all email and attachments secure, protecting and controlling access to data. Most importantly, if GDPR requires you to delete the PII you hold on an individual, Cryoserver will enable you to find and remove all the data from your email and attachments, and produce the audit trails to prove it.

Respond to Subject Access Requests (SARs) without delay

Cryoserver makes searches much quicker as its unique file structure is easier to navigate. An intuitive search interface also helps to make full company searches up to 80% quicker, so you can be responding in hours rather than days.

Privacy by design - a secure, audited archive

Cryoserver embodies Privacy by Design. Information on any one particular data subject can be produced rapidly, can be delivered to the data subject or deleted at their request. Access and deletion is audited to ensure the proper channels are followed.

“Information that does not need to be accessed regularly, but which still needs to be retained, should be safely archived or put offline.”

To ensure your business is fully compliant with GDPR, you have to carefully choose the best solutions for your budget. As you adapt your infrastructure to these regulations, Cryoserver ensures that your business is responsive and secure when it comes to email data.

The Cryoserver team has over 15 years' experience in email compliance and not only understand a range of GDPR issues, but also have a solution to help you address them and make sure your organisation is ready.

In order to be able to respond to the rights of the data subjects', you will need to:

- Find the right data for SARs (Subject Access Requests) when you receive them
- Much shorter response times than ever before
- Demonstrate ability to comply with your users' 'right to be forgotten'

Keep data secure and safe and for as long as necessary:

- Demonstrate 'privacy by design'
- Protect PII (Personal Identifiable Information) and manage it securely
- Demonstrate appropriate retention periods for various data types

Don't get caught out - make sure you know:

- Where locally stored data is in breach of policy (like local .pst files which contain any PII)
- Who the people with access to your archive are, and that their access is audited

“ We have something like 13 million emails in the system and searches still only take a couple of seconds.

”

- Head of IT,
Engineering Contractors

“ There are a handful of situations where we've had to prove an absence of communications, Cryoserver's forensic nature makes that possible.

”
