

Cryoserver Appliance

Cryoserver can be delivered as a plug and play sealed appliance providing a complete, audited, tamper-evident repository of emails sent to, from and around an organization, suitable for legal and regulatory compliance and for providing email archive data in court with high evidential weight. The appliances are available in different storage sizes and are high specification servers which will last for many years. All the appliances come with spare slots for future disc / storage growth making it easy for organisations to add more storage. Cryoserver is often likened to a black box flight recorder for electronic communications combined with Internet search engine-like performance for email discovery investigations.

Cryoserver has always been there for what we need it for and it's just done it. I'd absolutely recommend Cryoserver.

**Steve Allen,
Silchester**

We wanted a physical copy we could take with us if we decided to shift provider. By having it on-premise we could physically pick up the archive and take it with us.

**Luke Braham
Red**

Key features

- Plug-and-play - easy install
- Compliant- with on-premise data storage requirements
- Control your data - minimise risk with on-premise hardware
- Flexible - choose from a range of appliances
- Scalable - spare bays for additional storage without a new machine
- Platform independent - same great solution no matter the platform
- One point of contact for support; either software or hardware

Quality hardware

- The opportunity to maintain your own data in-house
- Appliances are delivered within two weeks of receipt of Purchase Order
- Custom built appliances to match your business needs
- Hardware issues covered quickly, as per the support agreement
- Replacement parts dispatched within 24 hours
- Simple install process supported by our engineers
- Full support at no extra cost, with instant replacement of hardware

Benefits

- Presents savings for organisations of all sizes
- Keeps compliance officers happy with on-site email archive

- Totally independent of the internet, you have complete control of updates and more
- Your store maintained your way

No need for in-house tech support to maintain either software or hardware

Email archiving to suit you

A solution that takes email efficiency to the next level

				
Boost Employee Productivity	Eliminate PST Files	Increase Mail Server Efficiency	Superior Findability	Complies With eDiscovery
